

The VEC proposal has a lot in common with the ARRL proposal (RM-10867). What they mostly have in common is restructuring to allow greater participation.

One if the items in both proposals is elimination of the morse code requirement in accordance with new international agreements.

The morse code requirement is one of the biggest impediments to the growth of amateur radio especially in this age of digital transmission capability and computers.

Therefore, I request that whichever petition you decide to act upon (of RM-10867 or RM-10870 or others) that you make the elimination of the morse requirement part of restructuring.

Thank you
